

**WOW!**  
The world's largest Easter egg, which was decorated in Brazil in 2023, stood more than 54 feet tall.

## Create eggs with a marble effect

### What you'll need

- Eggs
- Medium bowl and white vinegar (optional)
- Rimmed baking sheet or shallow baking pan
- Shaving cream
- Spatula
- Food coloring (neon or deep colors work best)
- Skewer or straw (to stir food coloring)
- Paper towels
- Wire cooling rack

### Instructions

1. Have an adult help you hard-boil eggs and let them cool. Optional step: Place the hard-boiled eggs in a bowl and pour the vinegar over them. Soak them for about 15 minutes and then dry them off. This will help the egg absorb more dye for brighter colors.
2. Fill the baking pan or sheet with a thick layer of shaving cream (or whipped topping—see “Tips”) and smooth it out with the back of a spatula.
3. Add a few drops of food coloring in one or more colors to one corner. Drag the skewer or straw through the food coloring to make stripes or swirls.
4. Dip the egg into the cream and roll it so it gets fully covered. Try to do this in one motion so the colors don't blend and get muddy.

5. Set the egg onto a paper towel or wire cooling rack to dry for at least 20 minutes until the cream has completely dried.
6. Use a paper towel to dab off the excess cream. You can add more drops in different colors to another section of the cream on the baking sheet and repeat steps 4 through 6. If you like, you can re-dip a dried dipped egg to add another layer of color.

### TIPS

- If you plan on eating the eggs, you can use store-bought whipped topping (like Cool Whip) instead of shaving cream. Store the eggs in the refrigerator.
- To prevent food dye from staining your fingers, wear rubber gloves or use tongs to lift the eggs out of the cream.

### ECO TIP OF THE WEEK FIND THE REUSABLE STRAW FOR YOU

Reusable straws help the environment because they keep single-use plastic straws out of oceans and landfills. There are several types of reusable straws you and your family can consider when looking for the ones that work for you. For example, silicone straws are durable, soft, and temperature-resistant for both cold and warm drinks, and come in bendy shapes. Bamboo straws are plant-based and biodegradable and will last for many uses. Stainless steel straws are easy to clean and won't retain the taste of your beverages. Whichever straw you choose, give it a frequent scrubbing with a straw brush to clear it of any drink residue.

Explore your many options.
